Aging index passes 100-point mark for first time nationwide

By Jake Chung / Staff writer with CNA

The nation’s aging index has exceeded 100 for the first time, highlighting the severity of the aging population problem, the Ministry of the Interior said in a report yesterday.

The aging index is found by calculating the ratio of people aged 65 or older to people aged 14 or younger.

Before this year, the index has exceeded 100 in three cities and counties in 2011; this year it did so in 15 of them.

The ministry said the index rose 6.68 points from 93.5 in February last year.

The report said that outside the six special municipalities, Chiayi, Nantou and Pingtung counties
Background

Total fertility rate 1.2

School Closeness/Amalgamation: 147
Reuse with counseling: 119

(Ministry of Education 2009)

Adaptive reuse

Use for tourism and leisure (36.97%), or maintain organizations' own (31.09%), Social welfare accounted for only 2.52%
2018⇒Aged society
Prevalence of dementia: 8%

2016 LTC 2.0 Plan
Integrated community-based model: Aging in place

Tier A “flagship stores” Including:
Day Care Center

Interview-1

02. Strong promotion from local government and the cooperation with administrative work.
03. Adequate communication with community resident.
04. Understanding and support from school faculty and their parents.

Source: Study Shooting, 20161205—20170308
Interview-2

05 good-neighborliness work and associated services providing.

06 The recruitment and assistance of community volunteers.

Source: https://www.facebook.com/kmtth.communityhealth/
07 Appropriate design and plan for original environment.

08 The overall operation needs to be fully integrated into local community living.
Conclusion

1. Collaboration from different units within or out of the community.
2. Keep common memories when refurbish school buildings.
3. Facilities should fit the original campus and community.
4. Policies are required to establish a continuous care network for people living with dementia.
